

WSBIS Working Team Meeting 10/20/2015

Present: Roman, Bill B, Steve K, and Heath

Phone: Larry and Margaret

Review minutes: We didn't review the minutes from 9/24/2015

Development Update (Bill):

- Tested Waterway update Form seen in LP
 - Working in Test
 - Looked at migrated data for an LP structure – everything seemed okay
- Hopefully sometime next week Bill will have a version for Larry to test
- Bill is going ahead with the rest of the modifications
 - Working on Load Rating tab as a priority above Export to Access due to the movement of fields from tblBridges to tblLoadRating
 - Inventory and Operating Ratings as well as associated codes are part of the fields being moved to the tblLoadRating
 - Reference MCD will have the reference CD Date in that field
- Load Rating Tab
 - Bill showed his current mocked-up form for the Load Rating Tab.
 - There appeared to be a sizeable difference between the form LP provided and the mocked-up form that started a fair bit of discussion.
 - Steve suggested a smaller group needed to get together to come to agreement about what the form would contain. This meeting needs to happen soon because time is getting tight.

Steve's Comments:

- There will be a deployment in January to move some fields from tblBridges to tblLoadRating.
 - A meeting with the development team will need to happen right after the October deployment to get everyone on board.
- Synchronizer:
 - We've discovered file issues.
 - The application was architected for files up to 3 or 5 MB in size.
 - Most recent change to the application brought out that there are larger files
 - These larger files are not workable in the new application
 - Files more than 200MB need to be handled outside of the application for the foreseeable future
 - Store larger files on a share or the FTP site, and not in the application
 - Video files are too large and won't be workable at all
 - There are files in BPO up to 170MB

- In order to handle larger files, the application would need to be re-architected.
- Probably a year or so out to implement the changes in the application to handle larger file sizes.
- Steve is going to research the files in more detail and share these larger files and the structures they are associated with via email with the group.
- Steve will also implement a max file size warning in the application so the user knows they can't add files over a certain size.
- Margaret is also going to add this to her WSBIS training documentation.

Next meeting Tuesday November 12th

Known agenda items:

- Load Ratings Tab (smaller group meeting to be scheduled)
